ADITYA RAMARIYA

Sr. Frontend Developer | React.js | Next.js | TypeScript | JavaScript | Redux Toolkit | Micro-frontend | FSD | Immediate Joiner

8+ Years Experience | +91-90399-74554 | aditya.ramariya@gmail.com | linkedin.com/in/adityaramariya | adityaramariya.github.io/portfolio | Pune, India

SUMMARY

Senior Frontend Developer with 8+ years of experience building responsive, scalable web applications and reusable UI components using React.js, JavaScript, TypeScript, Next.js, Redux, Context API, HTML5 and CSS3. Experienced in REST API integration, authentication, role-based access control (RBAC), responsive UI development, performance optimization and Micro-frontend Architecture. Strong experience collaborating with cross-functional teams to deliver production-ready web applications.

SKILLS

Core: React.js | JavaScript (ES6+) | TypeScript | React Hooks | Next.js | Redux | Context API | GraphQL | Redux Toolkit

Frontend: HTML5 | CSS3 | SASS | Figma | Tailwind CSS | Material UI | Bootstrap | Responsive Design | Mobile-First Design | Cross-Browser Compatibility

Architecture: Micro-frontend Architecture | Reusable UI Components | REST APIs | Authentication | RBAC | JWT

Tools: Git | GitHub Actions | Webpack | NPM | SonarQube | CI/CD | Docker

PROFESSIONAL EXPERIENCE

Career Break - Independent Projects & Technical Upskilling

Apr 2025 – Present

- Used this period to strengthen engineering skills through hands-on independent projects, expanding beyond core frontend development into architecture, deployment, and CI/CD automation.
- Built a personal developer portfolio and sample projects exploring Micro-frontend architecture and Docker.
- Developed and deployed .NET APIs on Render, gaining hands-on experience with backend integration and deployment.
- Configured GitHub Actions CI/CD to automate portfolio frontend builds and deployments.

Sr. Software Engineer | e-Zest Solutions Ltd, Pune

Apr 2021 – Apr 2025

- Developed reusable and scalable React.js components using React Hooks, improving UI consistency, maintainability and development efficiency.
- Built responsive, mobile-first user interfaces using HTML5, CSS3, Sass, Bootstrap, Tailwind CSS and Material UI across desktop, tablet and mobile devices.
- Developed applications using Next.js, implementing routing and static page generation for scalable web experiences.
- Implemented client-side state management using Redux and Context API, improving application data flow and component communication.
- Used Redux Toolkit to structure application state with less boilerplate and more predictable updates.
- Integrated GraphQL APIs to query and update application data in React components, alongside REST integrations.

- Integrated RESTful APIs and implemented authentication, authorization and role-based access control (RBAC) for secure application workflows.
- Developed reusable UI patterns and component abstractions to support scalable frontend architecture and consistent user experiences.
- Collaborated with backend developers, UI/UX designers and stakeholders to translate business requirements into production ready React applications.
- Used Git, NPM, Webpack and SonarQube for source control, build management and code-quality processes.
- Optimized frontend performance through code splitting, lazy loading, component optimization and bundle analysis, improving application responsiveness.
- Audited page performance with Google Lighthouse to identify bottlenecks and prioritize fixes, improving load times and performance scores.

Sr. Software Engineer | **Prolim Solutions, Bangalore** **Jul 2019 – Oct 2019**

- Developed reusable UI components and responsive layouts using HTML, CSS, and JavaScript.
- Converted design concepts into responsive, cross-browser compatible interfaces.
- Integrated APIs and enhanced functionality for usability and performance.
- Collaborated with the development team to resolve UI issues.

Sr. UI Developer | **LMS Solutions, Indore** **Apr 2016 – Mar 2019**

- Developed responsive web interfaces using HTML, CSS and JavaScript.
- Implemented reusable UI components and cross-browser compatible layouts.
- Collaborated with designers and backend developers to deliver client-facing web features.
- Delivered new features and improved existing interfaces for optimal performance.

UI Developer | **Cynexis Media, Indore** **Jan 2014 – Jun 2015**

- Developed responsive web interfaces utilizing HTML5, CSS3, and JavaScript.
- Implemented mobile-first designs and improved cross-browser compatibility.
- Collaborated with designers for accurate UI requirement implementation.

SELECTED PROJECTS

Compatibility Checker

Responsive application that determines whether a device is compatible with selected applications, with manual search and QR-based device identification.

- Built reusable presentation-focused UI components using React.js and Hooks.
- Implemented Next.js App Router for navigation and static page generation.
- Integrated device detection and QR scanning functionality.
- Developed responsive layouts for mobile and tablet users.

OneID Portal

Administrative web portal for managing a mobile application and its operational workflows.

- Built a scalable administrative portal using React.js and React-admin, providing structured interfaces for application management and operational workflows.
- Implemented secure authentication using JWT access tokens and refresh token rotation, supporting persistent user sessions.
- Set up CI/CD pipelines for automated build, test, and deployment workflows.
- Styled interfaces using Bootstrap and Tailwind CSS for a consistent, maintainable design system.
- Developed responsive layouts ensuring a seamless experience across desktop, tablet, and mobile devices.

ScottDunn

Luxury travel website presenting premium holiday experiences across ski destinations, safari lodges and expedition cruises.

- Reworked the website from the ground up using semantic HTML/CSS and Sass translating Figma designs into responsive web interfaces.
- Created modular Sass mixins and inheritance patterns for maintainable styling.
- Developed custom media queries for mobile-friendly presentation.
- Used Google Lighthouse to identify frontend performance opportunities and improve page performance.
